

Prevention and control of non-communicable diseases:

#### Grouping 1.1.1

The NCDs roadmap uses an individualized approach, recommends vertical interventions and ignores the commercial determinants of health. We urge MS to request stronger interventions on commercial determinants of NCDs, including access to medicines and air pollution.

The road map and GCM workplan encourage PPPs, without providing guidance on addressing conflicts of interest. Annex 4's proposal on NCDs during emergencies offers a "package" as a solution to a health system structural problem. We suggest integrating these interventions into comprehensive efforts aimed at health systems preparedness.

Annex 6 proposes a mental healthcare model based on purchasing commodified items of service. Mental health programmes should instead address barriers to justice and equity and be included in Comprehensive Primary Health Care.
